Taskly – Modern Task Manager

Taskly is a modern, minimalistic, and highly responsive task management application designed to help users organize their daily activities efficiently. It combines a clean user interface with powerful functionality, making task management simple and engaging.

Project Overview

Taskly focuses on delivering a **smooth and distraction-free user experience** through a visually appealing design and fast performance. The application features an **animated ambient background** with a glassmorphic UI, giving it a premium and modern look.

Key Features Explained

- **Beautiful Ambient Background**
  Uses a glassmorphic design with soft gradients and animations to create an attractive UI.
- **Smart Filtering & Search**
  Users can easily filter tasks (Active / Completed) and search tasks instantly.
- **Inline Editing**
  Tasks can be edited directly by double-clicking or using the edit option, improving usability.
- **Smooth Animations**
  Built using Framer Motion to provide fluid transitions and enhance user interaction.
- **Dynamic Task Interactions**
  Tasks instantly move between states (Active → Completed) with real-time UI updates.
- **Persistent State Management**
  Frontend caching ensures smooth performance while syncing with a fast backend.

Tech Stack Explanation

Frontend:

- **React.js (Vite)** → Fast and modern frontend framework
- **Tailwind CSS v3** → Utility-first styling for clean UI
- **Framer Motion** → Smooth animations
- **Lucide React** → Modern icons

Backend:

- **Node.js & Express.js** → REST API handling
- **CORS** → Enables frontend-backend communication
- **UUID** → Unique IDs for each task

How It Works

1. Backend server runs on **localhost:5000**
2. Frontend runs on **localhost:5173**
3. Frontend communicates with backend via REST API
4. Tasks are created, updated, deleted, and displayed in real-time

---

API Functionality

The backend follows REST principles:

- **GET /tasks** → Fetch all tasks
- **POST /tasks** → Create a new task
- **PUT /tasks/:id** → Update task title
- **PATCH /tasks/:id** → Toggle task status
- **DELETE /tasks/:id** → Remove task

Design Philosophy

Taskly is built with a focus on:

- Simplicity
- Clean UI
- Smooth user experience
- Modern color system

Color Palette:

- Indigo → Primary actions
- Emerald → Success states
- Amber → Warnings

Typography: Inter (clean and readable)

Final Summary

Taskly is a full-stack task management application that combines modern UI/UX design with efficient backend functionality to provide a seamless and productive user experience.
